

From a single bench scale to a complete weighing, inspection and labelling line – Hub & Spoke has solutions for food businesses of every size.

Whether you're a small food producer or a large food manufacturer, getting your weighing, packaging and inspection processes right is essential.

Are you weighing accurately? Is every pack labelled correctly? Can you detect potential foreign body contamination? And can you trace your products back through production when required?

At Hub & Spoke, we supply industrial weighing equipment, food inspection systems and automatic labelling solutions designed to support food production and packaging operations.

Our equipment range includes:

🔹 Industrial weighing scales – Bench, floor and pallet scales for accurate weighing, piece counting, filling and checkweighing applications.

🔹 Automatic checkweighers – Verify product weights against specified limits and identify packs that fall outside acceptable tolerances.

🔹 OCM outer case marking scales – Combined pack and case weighing and labelling solutions to support accurate product identification and despatch.

🔹 Automatic weigh price labellers – Automate product weighing, pricing and label application for efficient and consistent packaging operations.

🔹 Metal detection and X-ray inspection systems – Help identify foreign body contamination and support food safety and quality control

procedures.

🔹 Precision load cells – The weighing technology underpinning accurate and reliable industrial weighing applications.

But supplying the equipment is only part of the solution.

We also provide labelling and traceability software that can connect equipment data with production and batch records, helping information flow through your operation from goods-in to customer despatch.

And with over 30 years of industry experience, we offer more than machinery.

Our support includes:

✓ Equipment selection and consultancy
✓ Installation and commissioning
✓ Calibration and training
✓ Ongoing servicing and maintenance plans

One supplier. Connected equipment. Practical support.

Whether you're upgrading a single weighing station or planning a complete production line, we can help identify the right equipment and solutions for your operation.

Not sure what your production line needs?

Let's start with a conversation. We'll look at your processes, understand your requirements and help you explore the options.
